

NEW MODEL

FIXED FRAME DAY CHAIR

Developed as a successor to the Melrose Limited Edition day chair the Melrose Scorpion is the lightest titanium chair we have ever built. A 16" frame with the upholstery, forks and castors weighs only 3.9kg.

Incorporating an under frame to keep it strong and flex free the new frame directs all your energy into motion with an effortless silky smooth ride. Lightweight fork pivots with alloy casters and lighter close weave ballistic upholstery complete the package.

Melrose
KIWI CONCEPT CHAIRS

Pair it with the carbon fibre Topolino wheels (upcharge) and you have an incredibly light ride without any of the problems usually associated with carbon fibre frames.

Scorpion with Carbon Fibre Topolino Wheels

*MELROSE ERGO SEATING SYSTEM

A horizontal seat provides good pressure distribution with a neutral pelvic position while an angled seat gives better trunk stability and better pushing.

The ergonomic seat combines both horizontal and angled seating to give all three benefits. The ergonomic seat is angled, except for the back section, which is horizontal. The backrest is vertical and includes a rear-angled section at the top to give lumbar support for the spine.
